

KIPKORIR WESLEY

COMPUTER SCIENCE GRADUATE | SOFTWARE ENGINEER | CLOUD | AI & GenAI

[Linkedin](#) | [Github](#) | [Email](#) | (+254) 704 237 762

PROFESSIONAL PROFILE

I am a Full-Stack Software Engineer with over four (4) years, specializing in Node.js, React.js, and TypeScript, with strong experience building scalable web applications, API-driven systems, and AI-powered SaaS products. I have worked across the full development lifecycle from design to deployment, building backend services, frontend interfaces, and cloud-based solutions for real-world applications. My expertise spans modern web technologies (MERN, Next.js), API design and integration (RESTful and third-party services), AI development using LangChain and LangGraph for intelligent workflows, and workflow automation using n8n for system orchestration and integrations. I focus on building high-performance APIs, automation pipelines, and cloud-native applications using modern DevOps practices including CI/CD, containerization, and scalable cloud deployments on AWS, Azure, and GCP.

TECHNICAL SKILLS

Programming Languages	JavaScript (ES6+), TypeScript, Python, Java, HTML5, CSS3
Frontend Development	React.js, Next.js, responsive UI design, component architecture
Backend Development	Node.js, Express.js, REST APIs
API Development & Integration	RESTful APIs, third-party API integration, webhook systems, authentication (JWT, OAuth basics)
Databases	MongoDB, MySQL, PostgreSQL
Cloud & DevOps	AWS (EC2, S3, Lambda, deployment workflows), Azure fundamentals, GCP basics, Docker, CI/CD pipelines
AI & Automation	LangChain, LangGraph, prompt engineering, LLM-based applications, n8n

PROFESSIONAL EXPERIENCE

Kenya Revenue Authority (KRA)

Nairobi, Kenya
January 2026 - Present

Software Developer Intern

- Developed and supported internal digital systems and web-based tools.
- Worked on API-driven integrations for system communication and data exchange.
- Improved operational efficiency through automation and system support.
- Assisted in network troubleshooting and IT infrastructure maintenance.

University of Embu

Embu, Kenya
June 2024 - October 2025

Software Developer - Casual

- Develop and maintain university software applications
- Design, test, and debug software solutions
- Provide technical support and troubleshoot system issues
- Manage and maintain databases and system records
- Develop and maintain web-based applications and portals
- Perform software upgrades, updates, and system integrations
- Prepare technical documentation and user guides

Winas Savings and Credit Co-Operative Society Limited

Embu, Kenya
May 2022 - Aug 2022

ICT & Digital Operations attach

- Developed practical proficiency in network protocols, configuration, and routine network management.
- Supported troubleshooting activities and documentation for networking resources and equipment.
- Contributed to inventory management procedures for IT and telecommunications assets.

PROJECTS

Askforge

Personal Project
July 2026

AI-Powered Document & Web Q&A Assistant (RAG)

- Live Demo: <https://web-production-d46ef.up.railway.app/> | GitHub: <https://github.com/Worsley-Labwes/contextIQ.git>
- Built and deployed a Retrieval-Augmented Generation (RAG) assistant that answers questions grounded in user-uploaded documents (PDF, Word, CSV, Markdown, text), with automatic fallback to live web search when documents don't have the answer.

- Designed a multi-provider LLM architecture (OpenAI, Mistral, Google Gemini) with automatic detection and failover, avoiding dependency on a single AI vendor.
- Built a Flask REST API with real-time document upload, chunking, and vector embedding into a persistent ChromaDB store, enabling instant knowledge-base updates with zero downtime.
- Diagnosed and resolved production-grade issues, including native runtime crashes, third-party API authentication failures, and platform-specific deployment constraints; deployed to production on Railway using Gunicorn with persistent storage and environment-based secrets management.

EDUCATION

University of Embu

Bachelor of Science in Computer Science - Second Class
Honours (Upper Division)

Embu, Kenya
Sep 2019 - Sep 2024

- Relevant areas: software development, databases, networking, cloud technologies, cybersecurity, and ICT governance.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- AWS Cloud Practitioner Essentials - Amazon Web Services, September 2025
- Azure Cloud - Microsoft Learn / Simplilearn
- Cisco Certification in Networking
- Certificate of Appreciation - Class Representative, School of Pure & Applied Sciences, University of Embu, 2023
- Certificate of Participation - Embu Town Clean-up Exercise, University of Embu, October 2022

LEADERSHIP & COMMUNITY ENGAGEMENT

University of Embu

Class Representative, CSC 414 - ICT and Society

2023 - 2024

- Served as a liaison between students and lecturers and communicated academic and administrative matters.
- Coordinated class meetings, gathered feedback, and represented student concerns in faculty discussions.
- Promoted teamwork, discipline, and inclusive participation among classmates.

Google Developer Group (GDG) Embu & University Tech Community

Sep 2022 - Apr 2023

Member and Volunteer

- Participated in hackathons, workshops, collaborative coding sessions, peer mentoring, and open-source activities.
- Contributed to technology-focused community learning and practical software problem-solving activities.

Samoei Boys High School

Class Secretary, Journalism Club Secretary & Catechumenist

2017 - 2018

- Maintained records and minutes, supported activity coordination, prepared reports, and facilitated communication.
